datastor.io

Backups Don't Matter.......Only Restores Do

Built on Commvault's award winning platform, datastor.io provides Backup and Recovery for Mission Critical Systems and Data. With the control plane hosted in AWS for optimal avialbility, the solution can be deployed in any environment. This includes all Cloud, On-Premise and Hybrid locations.

What is datastor.io?

At datastor.io we understand that data protection can be complex and is critical to modern enterprise security. datastor.io is an offering that brings the power of Commvault's Enterprise Data Management solution to AWS combined with unparalleled backup and recovery expertise from a team of highly trained and focused professionals.

This simple yet powerful solution has been developed to assist Enterprises of all sizes to improve their data readiness, wherever their data may reside.

With datastor.io you get our indispensable concierge service, which helps navigate the complexities of modern data protection and recovery. This service includes architecture, design, implementation and support delivered directly via a staff of certified engineers.

Why is a Managed offering preferred?

Having certified engineers manage your backup environment in the cloud leads to less time managing backups, more time to focus elsewhere, and provides peace of mind knowing that the industry's best are protecting your data.

Hardware costs will go down. ROI will be near immediate. Any stress tied to your backup and restore requirements will be alleviated.

Where is datastor.io available today?

datastor.io is currently available via Private Offers on the AWS Marketplace(s) including Commercial Cloud, GovCloud and others. Utility Billing is coming soon!
